Review: Digipower Jumpstart Sport Travel Charger

Jun 15, 2009

Stephen Krasowski

There are three main items that I have on me all day, everyday: my wallet, my keys and last but certainly not least, my cell phone. Because I'm on the run a lot and don't really have the time to charge my cell phone every day, I've run out of juice plenty of times.

I've often wondered what would happen if my phone ran out of juice in an emergency and I was stuck on a deserted road in the middle of nowhere.

The new, fashionable Digipower Jumpstart Sport has certainly calmed my anguish, giving me instant power backup for not only my phone but almost any other portable device known to man, including PDAs, MP3 players, Cameras, GPS systems and even handheld games. The Jumpstart includes a USB cable, 7 different USB connectors for your various devices, AC wall adaptor and a protective carrying case. There is a convenient battery gauge on the unit itself to show the user how much power is remaining.

I recently allowed my cell phone to lose its juice so that I could test out this charger. I carried the 2 oz. lightweight charger with me until there was a need for a charge. I pulled out the trusty Jumpstart and was back on the road in not time, literally minutes. Being so lightweight, I had no problem carrying it around in my back pocket and I had the ability to charge both my phone and the Jumpstart simultaneously with my phone's car charger.

The Jumpstart will hold its charge for one year. It comes in various colors, including camouflage and plaid and this universal charger retails for \$49.99. The MSRP for the Jumpstart emergency charger is \$14.99.

I'm very excited about the Jumpstart Sport portable charger. It now lives in my car glove compartment for easy access if I ever break down on the side of that deserted road.

Digipower Jumpstart Travel Charger
\$49.99
